## **CLAIMS**

We-claim:

- A suppository composition for rectal administration of a lincosamide antibacterial drug, comprising an antimicrobially effective amount of the lincosamide dispersed in a Hard Fat suppository base, wherein the lincosamide is in the form of solid particles.
  - 2. The composition of claim 1, wherein the lincosamide is present in a form selected from the group consisting of a lincosamide salt and a lincosamide ester.
  - 3. The composition of claim 1, wherein the lincosamide is present in the form of a lincosamide phosphate.
- 4. The composition of claim 1 wherein the lincosamide is present in said composition in an amount from about 0.1 % by weight of the entire composition to about 60% by weight of the entire composition.
  - 5. The composition of claim 1 wherein the lincosamide is selected from the group consisting of pirlimycin and lincomycin.
  - 6. The composition of claim 1 wherein the lincosamide is clindamycin.
- 7. The composition of claim 6 wherein said composition contains 50 to 150 mg of the clindamycin is present in said composition in an amount from about 1.5 % by weight of the entire composition to about 7.5% by weight of the entire composition.
  - 8. The composition of claim 1 wherein said Hard Fat has a ß polymorphic form which has a flow point in the range from 30 °C to 40 °C.
  - 9. The composition of claim 1 wherein said Hard Fat has a β polymorphic form which has a flow point of 37 °C or less.

10. The composition of claim 1 wherein the Hard Fat is a mixture of glyceride esters—of—vegetable—C<sub>12</sub>=C<sub>18</sub>\_saturated\_fatty\_acids containing at least about 50% triglyceride esters.

5 5 5

I)1. The composition of claim 1 wherein the particles of lincosamide have particle size of  $10\mu m$  or less.

12. The composition of claim 1 wherein the Hard Fat base is a Hard Fat NF suppository base having the following properties:

10

Open-tube melting point:

31.0-33.0 °C (α polymorphic form)

Solidification point:

30.0-32.5 °C (α polymorphic form)

Hydroxyl value

max. 3 mg potassium hydroxide/g

Saponification value:

240-250 mg potassium hydroxide/g

Diglycerides

b)

the anus.

max. 15% by weight

Monoglycerides

max 1% by weight.

1.5

13. A method of rectally administering a lincosamide to a subject, comprising the steps of:

20

a) providing a suppository comprising an antimicrobially effective amount of the lincosamide, dispersed in a Hard Fat suppository base, wherein the lincosamide is in the form of particles, wherein the suppository is sufficiently small to pass through the anus of the subject; and

inserting the rectal suppository into the rectum of the subject, through

25

- 14. The method of claim 13, wherein the subject is a mammal.
- 15. The method of claim 14, wherein the mammal is selected from the group consisting of a dog, a cat, a sheep, a cow, a steer, a goat, and a horse.

30

16. The method of claim 14, wherein the mammal is a human being.

5

15

- 17. The method of claim 13 wherein the lincosamide is selected from the group consisting of lincomycin-and-pirlimyein.
- 18. The method of claim 13 wherein the lincosamide is a clindamycin.

19. The method of claim 13, wherein the lincosamide is present in a form selected from the group consisting of a lincosamide salt and a lincosamide ester.

- 20. The method of claim 13, wherein the lincosamide is present in the form of a lincosamide phosphate.
  - 21. The method of claim 13, wherein the lincosamide is present in the suppository in an amount from about 0.1% by weight to about 60% by weight of the entire composition.

22. The method of claim 13 wherein said Hard Fat has a ß polymorphic form which has a flow point in the range from 30 °C to 40 °C.

- 23. The method of claim 13 wherein said Hard Fat has a ß polymorphic form which has a flow point of about 37 °C or less.
  - 24. The method of claim 13 wherein the Hard Fat is a mixture of glyceride esters of vegetable  $C_{12}$ - $C_{18}$  saturated fatty acids containing at least about 50% triglyceride esters.

The method of claim 13 wherein the lincosamide has a particle size of  $10\mu m$ 

26. The method of claim 13 wherein the Hard Fat base is a Hard Fat NF suppository base having the following properties:

Open-tube melting point: 31.0-33.0 °C (α polymorphic form)

Solidification point: 30.0-32.5 °C (α polymorphic form)

Hydroxyl value

max. 3 mg potassium hydroxide/g

Saponification value:

-240-250-mg-potassium\_hydroxide/g

Diglycerides

max. 15% by weight

Monoglycerides

max 1% by weight.

27. A method of treating a mammalian subject infected with at least one grampositive, comprising the steps of:

- a) providing a suppository comprising an antimicrobially effective amount of the lincosamide, dispersed in a Hard Fat suppository base, wherein the lincosamide is in the form of particles, wherein the suppository is sufficiently small to pass through the anus of the subject;
- b) inserting the rectal suppository into the rectum of the subject, through the anus; and
- c) repeating step (b) until the subject is cured of the infection.

15

- 28. The method of claim 27, wherein the mammal is a human being.
- 29. The method of claim 27 wherein the lincosamide is selected from the group consisting of lincomycin and pirlimycin.

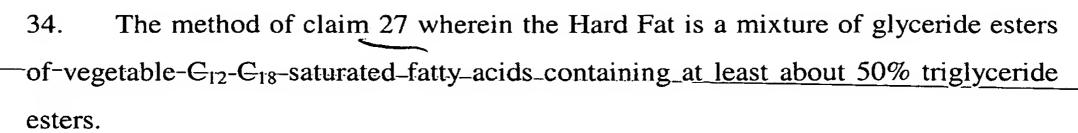

20

- 30. The method of claim 27 wherein the lincosamide is a clindamycin.
- 31. The method of claim 27, wherein the lincosamide is present in a form selected from the group consisting of a lincosamide salt and a lincosamide ester.

25

- 32. The method of claim 27, wherein the lincosamide is present in the form of a lincosamide phosphate.
- 33. The method of claim 27 wherein the Hard Fat has a β polymorphic form which has a flow point in the range from 30 °C to 40 °C.

35. The method of claim 27 wherein the lincosamide has a particle size of  $10\mu m$  or less.

36. The method of claim 27 wherein the Hard Fat base is a Hard Fat NF suppository base having the following properties:

Open-tube melting point: 31.0-33.0 °C (α polymorphic form)

Solidification point: 30.0-32.5 °C (α polymorphic form)

Hydroxyl value max. 3 mg potassium hydroxide/g

Saponification value: 240-250 mg potassium hydroxide/g

Diglycerides max. 15% by weight

Monoglycerides max 1% by weight.
